**OG#: 18-5316    Test Completed: 11/9/2018**

**TEST RESULT: HETEROZYGOUS**

**Call Name:** Peaches  
**Breed:** Miniature Schnauzer  
**Registered Name:** Elysium von Portenschlag  
**Registered Number:** VDH12ZS  
**ID Number:** 939000002114164  
**Birthdate:** 2/14/2011    **Sex:** Female

Dear Birgit,

We have tested your **Miniature Schnauzer, Peaches**, for Type B PRA:

**Test Result: Heterozygous**

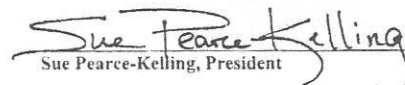

This dog's genotype for the predictive genetic marker, "Type B PRA Risk Variant" in Miniature Schnauzers is **Heterozygous**. It carries one copy of the Type B Risk Variant and is not at risk of developing this form of PRA. Dogs with this genotype can still develop other forms of PRA as, in the Miniature Schnauzer breed, there are at least two forms of PRA, i.e. the Type A PRA mutation and also an as yet uncharacterized PRA-causing mutation.

**Recommendations for Breeding:**

It is recommended that breeding pairs be selected in a way that would not produce puppies that carry two copies of (i.e. are Homozygous Risk Variant for) the Type B PRA Risk Variant. To avoid producing offspring that are at High Risk of developing Type B PRA, **this dog should only be paired with mates that are Homozygous Wild Type/Clear** for the Type B PRA Risk Variant. For further information, please consult the OptiGen website at [www.optigen.com](http://www.optigen.com)

DNA tests do not replace the importance of yearly examinations by your veterinary ophthalmologist.
